

# Low-Fogging Transfer Adhesive Bonds to Urethane Foams

Scapa Automotive's Unifilm® U797A is a low-fogging acrylic transfer adhesive specially designed to bond urethane foams as well as low surface energy materials and many metals. This product provides many high adhesion and performance benefits that make it ideal for lamination to foam, application of decorative parts and rubber extrusions, and product assembly.

## Product Benefits:

- Low-fogging adhesive
- Ultra high anchorage to a variety of urethane foams
- Excellent adhesion to low surface energy materials and many metals
- Performs well over a wide temperature range
- Extremely high tack, quick-stick, and peel strength
- Excellent chemical, humidity, and water resistance

## Typical Applications:

- Lamination to foam for gasketing and sound damping
- Application of decorative parts
- Rubber extrusions for functional and decorative purposes
- Product assembly

## Meets the Requirements of the Following Automotive Specifications:

- General Motors GM3622M (Type 1)
- General Motors GM3607M (Type 1)
- General Motors GM9985281-9
- Daimler Chrysler DCX MS CC-211
- Daimler Chrysler DCX MS CC-240
- Ford WSS-M11P62A
